Digital Literacy for Research

Matthew Frenkel, PhD

Engineering Librarian

Navigating the scholarly landscape can be a challenge for new graduate students. As you begin your journey you may still have many questions:

- What is the best way to get started with a research project?
- How do I find data and ethically use data?
- How can I organize, store, analyze, and share the data I create?
- Can I apply for a grant and where do I find opportunites?
- Where and how should I publish my findings?

FEBRUARY 9 : 10AM-6PM
FEBRUARY 10 : 10AM-4PM

Location :
1 Metrotech, room - 1917

In the Digital Literacy for Research professional development workshop track, we will build a roadmap of the scholarly landscape. Through a series of interactive workshops doctoral students will explore what it means to get involved with academic research, from inception to publication. Throughout this track we will cover topics that will expand your knowledge on how to conduct ethical research, best practices in data management, open science, communication and publications, and building a scholarly profile.
